Electronic Supplement 1: Specimens examined

This appendix lists all identifiable erinaceid specimens examined for this study. Age estimates from magnetostratigraphic information for Potwar and Zinda Pir localities follow locality numbers in parentheses. The two columns to the right are measurements in millimeters. Notation like "m1/2" means that the specimen is either an m1 or an m2, but could not be differentiated. For tooth-bearing jaws, we list the specimen itself under its main number, then any teeth inside the jaw under the number followed by a single-letter suffix.

Specimen #	Locality (Ma)	Element	Length	Width
