Steps to submit an item

1. Authors (required):
   Last name, e.g. Smith
   First name(s) and suffixes, e.g., John M. Jr
   Lookup & Add

Enter the names of the authors of this item.

- [ ] 32b1c12cb1f4cb4563 Weyl, Eric Glen
- [ ] 63a87f6ac4467806 Frederickson, Megan E.
- [ ] Yu, Douglas W.
- [ ] a7a5ae5c104a39403 Pierce, Naomi Ellen

2. Department Affiliation (required):

   Please select one or more departments. To select multiple disjoint departments, Control-click (on Windows/Linux) or Command-click (on a
Macintosh

3. Title (required):

**Are Mutualisms Maintained by Host Sanctions or Partner Fidelity Feedback**

Enter the title of the item.

4. Serial Title (recommended):

**Proceedings of the National Academy of Sciences of the United States of America**

Enter the title of the serial (journal, proceedings, etc.) in which the item is published.

5. ISSN (recommended for journal articles):

Enter the ISSN here.

- **0027-8424**

Enter the ISBN of the work (or book it is part of) here.

7. Citation (required):

8. Publisher (optional):

**National Academy of Sciences**

Enter the name of the publisher of this item.

9. Publication Year (optional):

**2010**

Enter the 4 digit year of publication.

10. Subject Keywords (optional):

Enter appropriate subject keywords or phrases above.

- contract theory
- mutualism
- symbiosis
- evolution of cooperation
Although mutualisms are common in all ecological communities and have played key roles in the diversification of life, our current understanding of the evolution of cooperation applies mostly to social behavior within a species. A central question is whether mutualisms persist because hosts have evolved costly punishment of cheaters. Here, we use the economic theory of employment contracts to formulate and distinguish between two mechanisms that have been proposed to prevent cheating in host-symbiont mutualisms, Partner Fidelity Feedback (PFF) and Host Sanctions (HS). Under PFF, positive feedback between host fitness and symbiont fitness is sufficient to prevent cheating; in contrast, HS posits the necessity of costly punishment to maintain mutualism. A coevolutionary model of mutualism finds that HS are unlikely to evolve de novo, and published data on legume-rhizobia and yucca-moth mutualisms are consistent with PFF and not HS. Thus, in systems considered to be textbook cases of HS, we find poor support for the theory that hosts have evolved to punish cheating symbionts; instead, we show that even horizontally transmitted mutualisms can be stabilized via PFF. PFF theory may place previously underappreciated constraints on the
