A DUE PROCESS FOR BIOETHICS

Susan S. Lee
J.D. Candidate, June 2002
April 26, 2002

**Submitted to Professor Hutt
for third year written work requirement**

Table of Contents

Introduction	1
Section I: Overview of Efforts to Craft Bioethical Standards	
and Policies	12
Section II: Why Bioethical Standards Are Particularly Important	
for Modern Biotechnology	37
Section III: Consideration of Different Decision Making Options . . .	51
Section IV: A Proposal for an Institution Dedicated to the Development and Implementation of Bioethics Policy	61
Conclusion	77

Abstract

With the sequencing of the human genome, biomedical science has entered what is likely to be an era of remarkable progress. This progress will bring tremendous improvements to human life, but it also raises difficult ethical questions. Many of these questions are ones on which reasonable people can, and do, differ. The public outcry over recent events, from the cloning of Dolly the sheep to the debate over embryonic stem cell research, demonstrates how divisive bioethical issues can be.

As biotechnology continues to advance at a rapid pace, the need to address bioethical issues in a proactive, thoughtful way is more urgent than ever before. This paper proposes a permanent government institution, called the Agency for the Genetic Technologies Community (AGTC), which would be dedicated to this purpose. It is designed to facilitate the formulation and implementation of consensus-based bioethics policies. Although regulating biotechnology will be very challenging, establishing a process for the development of bioethics policy is a critical first step toward doing so successfully.
